Some RISK OF DISTORTION

on tracks marked "over" or below -0.30 dB on Disc 1. Surprisingly, the peaks on Disc 1 are higher as on Disc 2 - did different people master each CD?

Some background noise still audible (mostly on 1-1 ... 1-9). Too much (modern digital) compression used on most tracks (e.g. beginning of 1-4), making many tracks "lifeless"! Must be a cheap model of compressor, IMHO. Also some digital artifact audible (e.g. beginning of 1-14). 1-14 is without any flaws at 1:46-1:48! 1-13 is one of the better mastered tracks here, even when over-compressed.

All stereo, frequency response is okay, one is a little dull (2-10).

This isn't a good remaster at all, which is really a shame on these tracks!

2/1/2

orange because of DR value and compression used ("lifeless")

Extra CD content is okay, liner notes, complete track details, pics etc.
